

PUMP STATION UPGRADE

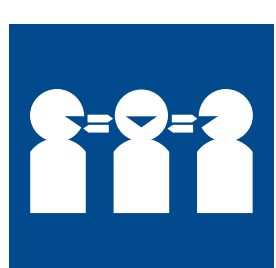

City of Melbourne is replacing the Stubbs Street pump station to increase drainage capacity for low-lying areas of Kensington.

The existing station has insufficient capacity to cater for some storm events, which has led to flooding in the area in recent years.

The upgrade involves installing a new underground pump station in the Smith Street car park.

Once complete, the new station will have almost four times the capacity of the existing station, and will cater for a 1 in 20 year storm event.
